

T-3600

E40D/4R100 Center Support Bearing Installer

Our new T-3600 bearing driver will set the fragile roller bearing correctly every time.

No more worries of potential damage incurred during installation... we have sized our driver exactly for the task. It contacts the outer race while an o-ring holds the inner snug and centered; ensuring the bearing surfaces will remain smooth and trouble free once installed.

Often, the center support hub surface is in great shape but you don't trust the bearing. Why pay over \$50 for a new support kit when you can now replace the bearing quickly and accurately for only a small percentage of that?

Don't just hope... know that it's done right!

T-3600 pictured with a new bearing. An OEM center support hub is placed in the background for reference.

A few taps and it's done.
T-3600 is a great fit!

The T-3600 fits the larger 1.180" ID "OEM type" roller bearings found in most '95-up units with the OEM support.

Milled from aluminum , our driver is engineered for a lifetime of service.

"Let's work smarter, not harder!"

~Michael Black, Adapt-A-Case 2009

The o-ring helps hold the bearing in place during installation.

Answering challenges with profitable solutions.
